"If you get a chance to hear Ted Speak, **don't miss it!**"
Roger Gregory

Theodor Holm Nelson

"The *enfant terrible* of computerdom."
The New York Times, 1980s

"Madman *extraordinaire* and one of the most brilliant minds of our time."
Michael Fraase in *Macintosh Hypermedia* vol. I

"[Buckminster] Fuller's successor."
The New Republic

"My role model, my hero."
Timothy Leary

"The Thomas Paine of the personal computer revolution."
Stewart Brand

"Yes, a real Paine."
Anon.

"The most outrageous and probably the funniest of the infonauts."
Howard Rheingold, *Tools for Thought*

"The mad poet of computerdom."
Playgirl's American Bachelors Register

"I get my best ideas from misunderstanding Ted."
Paul Saffo, Institute for the Future

Philosopher and film-maker, designer and generalist; stand-up visionary, living legend, adventurer and wag. Designer of interactive software for personal computers since 1960. Pioneer of the cinematic approach to interactive systems and the literary approach to the storage of information. Best known for the terms *hypertext* and *hypermedia*, which he introduced in 1965. Cult figure, author of various books and articles, renowned extemporaneous speaker (his 1990 World Tour included four keynote addresses), general maverick.

Founding designer of Project Xanadu™, a universal software package intended to replace paper publishing in the 21st Century-- a new linked method for storing all information, as well as working with it, organizing it and publishing it (with automatic and unobtrusive royalty). His thirty-one year struggle to develop Project Xanadu is a legend in itself. Xanadu has evolved into a product (software to maintain connections among evolving digital materials in all media), a division of Autodesk, and the Xanadu World Publishing Repository™ (Public-Access Xanadu™), which Nelson will head.

Known for mighty projects, new paradigms and new words: hypertext and Xanadu, of course; General Schematics, a complete philosophical system, terminology for the description of complexity, and system of logic; the general theory of Biostatus, a new theory of psychology that subsumes Darwin, Freud, Maslow, and the energy of Japan; the theory of Virtuality, the broadest theory of interactive sytems and software design; and the ZigZag™ hypergrid, a new universal design for all software. Many of his terms have entered the computer field, including (besides *hypertext* and *hypermedia*), *image synthesis, dildonics, electronic visualization* (and thus *visualization* in its current sense), *docuverse*, *transclusion*, and *Chairman Bill*.

His early work on hypermedia and linkage makes him the father of some of the computer world's most-talked-about new features, including "multimedia," the hot link of Windows™ 3.0 and the aliased application in Mac™ System 7™ – all of which he considers to be warped and regrettable in their current forms. His vision of integrated software does without "files," "applications" and "metaphors."

Son of theatrical parents, raised in Greenwich Village by grandparents; played hookey to go to foreign movies and hang out in bookstores; 7th-grade dropout, but forced to go back eventually; college legend for his publications, plays, musicals, pranks and film; B.A. in philosophy from Swarthmore College; M.A. in sociology from Harvard; work in dolphin research (for John Lilly), in publishing (under Wild Bill Jovanovich), on anti-ballistic missile system; sometime professional photographer, writer, film-maker, software designer, folk singer, cab driver, editor of a national magazine, and academic.*

Author of *Computer Lib, The Home Computer Revolution, Literary Machines*, and many articles. Now Distinguished Fellow, Autodesk, Inc., and Visiting Professor of Information Science at the University of Strathclyde (Glasgow, Scotland). He is active in the program of the Human Awareness Institute of San Mateo, California.

Like his boyhood heroes Bucky, Bertie, Orson and Walt, he is widely referred to simply by his first name ("Ted-San" in Japan). Indeed, he is now recognizable as the Orson Welles of software: an individual of extraordinary talents and ambitions who knew too much too soon, refused to work within the system, and paid the price. Till now.

And has he got a story to tell.

*Teaching in departments of Economics, Sociology, Anthropology, Art, Architecture, Computer Science, Instructional Resources Development, and Information Science.

"Ted Nelson? ... Hypertext? ... Be still, my heart! Oh, Wow!
"This is a guy who couldn't hold a job for twenty years because he had all these great ideas, and I read his stuff and it got me all excited, but then he dropped out of sight.
"Now suddenly people are getting all excited about his ideas, and he's suddenly prominent.
"And I figure, **if Ted Nelson can make it, so can I!**"
A Sausalito passerby, 1988
